Elements of Design

Tactical

Good Design

Repetition

The control of visual information in an arrangement or presentation to imply importance.

_Space

_Color

_Shape

Alignment

Every element in it is visually connected to another element. Nothing feels out of place or disconnected when alignment has been handled well.

_Space

_Size

_Line

Handwriting practice lines consisting of 20 horizontal lines, each with a short vertical line at the left end, forming a series of slanted boxes for letter formation.

Proximity

Visual unity in a design. Minimizes visual clutter, emphasizes organization, and increases viewer comprehension.

The Element of Design

A beautiful design is not a product of great imagination or a result of an idea. Rather, it is a product of carefully plotted design elements chosen to create a visual representation of the idea and the imagination.

Design is not about pictures placed together and arranged in a way that creates a story. Design is about creating harmony among the elements and having them come together in a final product that is unequivocally outstanding.

The elements of design refer to a set of particular guidelines for graphic designers or artists. Design elements are the basic unit of painting, design, drawing, or any other visual piece coming into existence.

The Principles of Design

Principle in this field refers to the ways elements may be manipulated to create a work of art.

The principles and elements of design both carry the same weight in executing an effective piece. If you disregard the principles, then you have a visual piece that lacks a story.

These principles are guidelines that are used to visually communicate the ideas represented by the elements.
